Dear Act 250,

As a nearby resident that passes by the mine routinely, I am glad to see, for the first time in years, some grading, about 1/3, of the shear gravel cliffs that spread pollutants like silicas and phosphates through air and water runoff.

I would like to encourage my neighbors to continue to make improvements to the gravel pit that further reduce these contaminants into the local watershed.

Still have a concern that the previous Danby pit across the road has been described by Act 250 as "restored", which it clearly is not. Is this the best practice we will see on the latest gravel pit? Appears the gravel corporation running the pit thinks so.

Thanks for your consideration.

Best

Mike
